

$q = 2$  $q = 3$  $q = 4$  $q = 5$ 

Code exists: $c = n - q - 1$

Code exists: $c > n - q - 1$

No code found; nonexistence unproved

Unmarked gray cell: no result asserted in this figure.

Code exists: $c < n - q - 1$

Nonexistence certified, including implications at smaller c

-- Reference $c = n - 3$; not a general bound
